Per-form´ance— Defined as *functional effectiveness*” by Webster. The simplicity of its definition seems contrary to the effort, expense and engineering required to achieve this most illusive of IT pursuits.

The landscape in which e-Business and e-Commerce applications must operate is new and ever changing. The Open Systems architectures embraced in the 1990s is creating havoc for the redeployment of legacy systems and the designing of new systems in the new millennium. Too often trial and error are providing the benchmarks of Performance.

Now, there is a company and a tool set that can point out numerous seemingly unassociated performance problems in current applications or model the infrastructure on which your new applications will run BEFORE they are developed.

The Experience of Professionals

Tools alone will not correct Performance problems or prevent problems in new applications. While Bennett Group International (BGI) uses the best and most advanced tools in the industry to uncover issues, neither the tools nor their purveyors will attempt to correct the problems. Not only can BGI field a team of experts to uncover your performance mysteries or challenges, but we can then proceed to implement the infrastructure or design changes that will correct those problems quickly.

BGI employs the following methodology to permanently correct or anticipate performance issues:

- ? **Data Gathering** — The scope and depth of the infrastructure that supports an application can be far reaching and complex. From legacy systems to OEM software interfaces, from network management protocols and end user integration, to what data bases and internet protocols are required, BGI leaves no stone unturned in the complete end-to-end analysis of performance.
- ? **Data Analysis** — Again, the data itself is not enough—expert analysis, often in our own labs, is required to sift through copious amounts of data and arrive at your applications specific performance matrix.

BENNETT GROUP INTERNATIONAL

- ? **Performance Analysis and Reporting** — Once the data gathering and analysis has provided the metrics of each and every software and hardware component in the end-to-end application infrastructure, BGI then builds a comprehensive performance report and a *DYNAMIC* model of the application environment. A model that can be changed and reconfigured with endless “what-if” scenarios.
- ? **Performance Correction Deployment**— The issues are brought to light. The solutions are identified and agreed upon. From Data Base conversions to complete infrastructure redeployment, BGI has the experience and resources to provide expert project management and mission support resources to any corrective effort.

We Can Get You There:

BGI has considerable experience in IT Center consolidations, mergers and major IT transitions. We bring several decades of large project management experience to our Performance Services. Additionally, our knowledge of legacy systems and applications integration makes BGI a formidable competitor for your eBusiness dollar.

No one can attack the far reaching scope of eBusiness applications deployment alone. Not even BGI. We enjoy partnerships with some of the best performance and integrator specialists in the world. They have tools and statistics that we use to keep you consistently in tune with developments and discoveries in end-to-end application performance.

Solution Deployment:

Our Performance Service is based on tools and experience from HyPerformix, Inc.™. A leader in performance modeling and analysis. Core competencies of BGI include many skills and disciplines required in deploying performance correction solutions.

Project Management—We are known for providing some of the best Objective and Scope management in the business. Our projects come in on-budget and on-time with greater frequency than any of our competitors.

Conversions of any Data Base to DB2—Through a strategic partnership with Crystal Systems™ BGI offers tools and professional expertise for conversions or upgrades from IDMS, Oracle, ADABAS, VSAM and others, to DB2.

Conversion of Cobol to JAVA—As a component in Web enabling Legacy applications BGI, in cooperation with Crystal Systems™, offers tools and expertise in converting legacy applications to web power houses. Whether you want to convert only the presentation (CICS Maps, etc.) to JAVA and HTML or the entire application AND data bases to open systems applications, BGI has the team that can produce the results you need—guaranteed.

Enterprise Automation—Bring central command and control to the entire IT Center. From IBM and UNISYS mainframes, to HP, Compaq/DEC and SUN platforms, BGI can provide state-of-the-art automation, event scheduling, batch scheduling and problem management to the entire enterprise. Literally dozens of operating systems and ERP systems are supported: Unisys 2200, A-Series; IBM AS/400, OS/390, Z/OS, AIX; VMS; SAP; PeopleSoft; HP/IX; SUN Solaris; Tandem, and many more.
